

Ukwelashwa kwe-BP

Bonke abantu abane-hypertension kudingeka benze izinguuko endleleni abaphila ngayo – ukudla okunempilo, ukuzivocavoca njalo, isisindo esifanelekile nokunciphisa usawoti notshwala. Izindlela zokwelashwa kudingeka zidingidwe nodokotela wakho. Abantu abaningi bazodinga imithi abayoyiphuza ukuphila kwabo konke. Abanye abantu bazodinga ukuhlolwa kaningana ukuze kutholakale okuyizona zimbangela zomfutho wegazi ophezulu kubo. Lokhu kungadinga ukwelashwa okukhethekile.

Mayelana Nemithi Yakho

Phuza umuthi owunikiwe nsuku zonke.

- Izivimbeli zokuguquka kwe-enzyme ye-Angiotension
Imiphumela Emibi: I-Angio-oedema (ukuvuvuka kwezindebe, umphimbo noma ubuso. Yeka umuthi futhi ubonane nodokotela) ukukhwehlela, i-potassium eningi.
- Izivimbeli zokwamukeleka kwe-Angiotensin
Imiphumela Emibi: I-potassium eningi.
- Isivimbeli se-Calcium Channel
Imiphumela Emibi: Ubuahlungu bekhana, ukuvuvuka kwamaqakala, nokuqumbelana.
- Amaphilisi andisa umchamo (i-thiazide noma afana nayo)
Imiphumela Emibi: Ukwanda kwe-glucose, i-gout, i-sodium ephansi noma i-potassium.

Uyini Umfutho Wegazi Ophezulu (Blood Pressure, BP)?

Umfutho Wegazi Ophezulu (BP) wenzeka lapho umfutho osemithanjeni uba phezulu futhi uqhubeka ukuleso simo. I-BP ephezulu (ephinde yaziwe nangokuthi yi-hypertension) ithinta abantu abadala abangu-3 kwabangu-10 eNingizimu Afrika

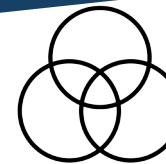

Yini ephakamisa i-BP?

- Ubudala
- Uhlanga
- Ukunona
- Abantu abane-BP emndenini
- Ubulili
- Ukungazivocavoci
- Ukudla ukudla okungenampilo

Kungani kufanele ukhathazeke nge-BP ephezulu?

I-BP ephezulu iyimbangela enkulu yesifo sonhlangothi, isifo senhliziyo, ukumelwa yinhliziyo kanye nokungasebenzi kahle kwezinso. Zonke lezi zifo ziholela endleleni yokuphila engeyinhle futhi zibangela ukufa.

Zikhona yini ezinye izifo ezivame ukuhambisana ne-BP ephezulu?

YEBO: • Isifo sikashukela • Ikholestoroli ephezulu • Nomzimba omkhulu

Izinkinga ezidalwa Umfutho Wegazi Ongalawuliwe (Hypertension HPT)

Indlela Yokugwema i-BP Ephezulu

- Yidla ukudla okunempilo – okungenawo usawoti omningi kanye noshukela futhi okunezithelo eziningi kanye nemifino.
- Zivocavoce nsuku zonke imizuzu engu-30.
- Nciphisa ukuphuza utshwala.
- Ungabhemi.
- Isisindo somzimba wakho masifanelane nobude bomzimba wakho.

Ukuholowa

Kufanele uye kohlolwa inhliziyo nge-ECG futhi uhlolwe nezinso ngokuhlolola umchamo unyaka ngamunye. Unyaka ngamunye kufanele futhi uhlolelw ushukela kanye nekholestoroli ephezulu.

Ukuhlungwa

Ngokuvamile i-BP ephezulu ayinazimpawu ngakho kufanele uhlole i-BP yakho unyaka ngamunye. I-BP ithathwa ngokubopha umkhono oqinisa ingalo yakho futhi njengoba ulokhu udedela uzobona ukugijima kwegazi emithanjeni yakho. Inombolo yokuqala ibonisa lapho igazi liqala ukugijima futhi inombolo yesibili ibonisa lapho igazi seligijima ngokukhululekile. Gwema ukudla, ikhofi kanye nokubhema esikhathini esinguhhafu wehora ngaphambi kokuthathwa kwe-BP

Izinombolo Zomfutho Wegazi:

Okuvamile: $<120/80\text{mmHg}$

I-Hypertension: $\geq140/90\text{mmHg}$

Kunezigaba ezingu-3 ze-Hypertension:

1: $140-159/90-99\text{mmHg}$

2: $160-179/100-109\text{mmHg}$

3: $\geq180/110\text{mmHg}$
